Pretoria, Gauteng, South Africa

CERTIFICATIONS

Microsoft SC-900
Security, Compliance & Identity Fundamentals · Passed

CompTIA Security+ (SY0-701)
Exam scheduled · 11 November 2026

TECHNICAL SKILLS

Offensive & Assessment

Nmap · Metasploit · GVM / OpenVAS · OSINT · Recon-ng · theHarvester

Detection & Monitoring

Wireshark · tcpdump · Snort 3 · Suricata · ELK Stack · Arkime · TheHive

Infrastructure

Kali Linux · Linux CLI · Docker · VirtualBox · Sophos Firewall · SSH / tmux · Windows

Web Development

HTML · CSS · JavaScript

Rikus *van Rooyen*

ASPIRING CYBERSECURITY ANALYST · SOC-FOCUSED

Cybersecurity analyst in training with hands-on penetration testing, vulnerability scanning and network monitoring experience from a live workplace placement. I build my own lab environments to practise both attack and defence, from firewall-segmented exploitation labs to a full SOC stack, and I document what I find clearly enough for others to act on. Backed by a software development foundation in web technologies, I'm looking for an entry-level SOC Analyst role where I can keep learning fast and contribute from day one.

EXPERIENCE

Cybersecurity Intern (Work Integrated Learning)

2026 – Present

Everest Wealth Management · Pretoria · placed through Gknect

- Carried out an authorised internal penetration test of the corporate network, mapping live hosts and identifying critical exposures, including unsecured database services and an exposed device debug interface.
- Wrote a formal findings report with risk ratings and remediation guidance for management.
- Deployed a dedicated Kali Linux security server on a mini PC with static addressing, SSH remote access, persistent tmux sessions and Docker-hosted vulnerable web apps for safe testing.
- Performed OSINT investigations, network reconnaissance and vulnerability scanning as part of ongoing security assessments.
- Maintain a detailed daily logbook of tasks, skills applied and challenges resolved.

EDUCATION

Occupational Certificate: Cybersecurity Analyst (NQF 5)

Feb 2026 – 2027

CTU Training Solutions · Menlyn Campus

Academic year completed; finishing the Work Integrated Learning component, with the EISA exam in 2027. Coursework covered security governance and compliance (POPIA), incident response, network scanning and footprinting, phishing analysis, packet analysis, vulnerability scanning and IDS configuration.

Software Development Programme

Jan – Aug 2025

Codespace · South Africa

Front-end web development with HTML, CSS and JavaScript.

National Senior Certificate (Matric)

2024

Hoërskool Oos-Moot · Pretoria

MORE SKILLS

Microsoft Security

Entra ID · Defender · Purview · Zero Trust

Governance

CIA Triad · POPIA · Incident Response · Risk & Compliance

LANGUAGES

Afrikaans	First language
English	Fluent

PORTFOLIO

Full write-ups of these labs, the methodology behind them and the problems I solved along the way are on GitHub.

github.com/Rikusvr375

HOW I WORK

- Document everything, clearly enough to hand over
- Stick with a problem until it's solved, then write down how
- Test only with authorisation, and keep client details private
- Step up when a team needs a lead

NEXT STEPS

- CompTIA Security+ · Nov 2026
- CompTIA CySA+
- Cybersecurity Practitioner (NQF 6)

REFERENCES

Available on request.

EXPERIENCE (CONTINUED)

Freelance Web Designer

2026 – Present

Self-employed · Pretoria

- Build websites for local businesses that have no online presence and pitch them to owners in person.
- First project: a salon website with online booking across six stylists and an owner dashboard.

LABS & PROJECTS

Firewall-Segmented Exploitation Lab

Three-VM topology with a Kali attacker on the WAN, Metasploitable 2 on the LAN and a Sophos Firewall routing between them. Exploited the vsftpd 2.3.4 backdoor through the firewall to demonstrate the risk, then moved on to IPS detection and blocking.

Kali · Sophos Firewall · Metasploit · Nmap

Home SOC Stack

Installed and configured Kali Purple with an analyst toolset for log aggregation, network intrusion detection, packet capture and case management, as hands-on preparation for SOC work.

ELK · Suricata · Arkime · TheHive

Vulnerability Management Lab

Built a GVM/OpenVAS scanner on Kali and scanned a Windows target. Solved a long chain of faults: database collation mismatches, stale feed locks, SCAP rebuilds and a host firewall silently blocking scans.

GVM / OpenVAS · PostgreSQL · Windows

Network Analysis & IDS

Packet capture and protocol analysis comparing HTTP and HTTPS traffic, plus Snort 3 intrusion detection configured from scratch with its Lua-based rules setup.

Wireshark · tcpdump · Snort 3

OSINT Toolkit & Teaching Guide

Assembled a ten-tool OSINT toolkit on Kali, then produced an interactive Recon-ng walkthrough and a 36-page guide used in an instructor-authorised lab exercise.

Sherlock · Maigret · Recon-ng · Subfinder · exiftool

Phishing Incident Response Plan

Led a group presentation on an AI-generated phishing scenario. Took over threat identification and the incident response plan when members dropped out, and delivered a 20-slide final deck.

Leadership · IR planning · Threat analysis

Salon Booking Website

Website for a local hair salon with online booking for six stylists and a dashboard for the owner, built as a ready-made proposal for a business with no web presence.

HTML · CSS · JavaScript

Dual-Boot Kali Workstation

Set up Kali alongside Windows on a laptop, working through Secure Boot key changes and BitLocker recovery after firmware changes, then configured a full tooling environment.

Kali · UEFI · BitLocker
